

LIP AUGMENTATION

Next to Botox this is the most popular procedure we perform. Some people are born with thin lips, with others their lips thin with age. Aging also causes the corners of the mouth to droop, pulling the lips downward. Smoking, drinking from straws and pursing the lips can cause vertical lip lines.

All of these problems can be treated and completely reversed with simple injections. We use a variety of safe products including:

Juvederm

A hyaluronic acid product that has taken the place of Restylane. It produces immediate results and lasts about six months in the lips.

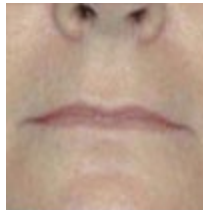

Silicone

Medical grade, FDA approved silicone is injected over three to four treatments at monthly intervals. The effect is permanent.

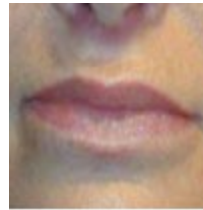

Both of these products give natural looking and feeling lips, and are completely safe. Dr. Alkek has performed silicone injections for over 25 years, and has found it to be the safest product giving the most natural result when used properly.

See [Dermal Fillers](#) for more information about these products.

***Remember that “Beauty is a matter of millimeters,”
and lips should look natural, not overdone.***
